

26F1 Homework

Verbs and Voice and Functions and Exponents

What will homework look like?

Every week, we will give you 6–8 questions to work on (about 30 minutes), split between English language arts and mathematics. Some questions will be more challenging than others.

Try your best to submit your work before the start of the next lesson, but remember that homework is optional. You will sometimes see additional practice worksheets. You do not need to complete those; we will only grade the documents labeled “26FX Homework.”

Homework will be graded out of eight points; a tutor will give you feedback on your work. Feel free to resubmit and correct your mistakes as many times as needed.

English Language Arts: Verbs and Voice

1. Which underlined word or phrase is a gerund? [1]
 - A. The barking dog woke the neighbors.
 - B. Maya hopes to attend Stuyvesant.
 - C. Swimming requires strength and practice.

Mathematics: Functions and Exponents

Clearly indicate the necessary steps, including appropriate formula substitutions, diagrams, graphs, charts, etc. You may not use a calculator. For all questions in this part, a correct answer with no work shown will receive only **0.5 point**.

5. A supermarket discounts the prices of all of the items in their store by 36% for Black Friday. The Black Friday prices are then increased by 15% to provide a smaller sale for the weekend. To the nearest percent, how much do the weekend prices need to be increased to return to the original prices? [1]

Write your answer here.

6. A plumber charges \$443 for four hours of service, which included a \$15 travel fee. Assuming that the relationship between hours of service and cost is

linear, which equation best represents the cost of this plumber in dollars as a function of hours of service? **[1]**

A. $f(h) = 443h - 15$

B. $f(h) = 107h + 15$

C. $f(h) = \frac{443}{4} + 15$

D. $f(h) = 107 - 15h$

Justify your answer here.

7. For two integers a and b , $(2^a)^b = 8$ and $(-3)^a \times (-3)^b = 81$. Solve for a and b . **[1]**

Write your answer here.

8. Solve for all positive values of x : $x^2 - \sqrt[3]{27} = 97$. **[1]**

Write your answer here.
